 36996 Co. Rd. 53, Amherst, CO 80721
visionangus@pctelcom.coop

In an effort to better serve commercial cattlemen and our customers, we believe it is important to separate our bulls into two different growth categories using their full EPD profile and what we know about the generations of cows and genetics behind these bulls. It has been our opinion and belief, for over a decade, that growth is a relative term that has at least two interpretations. You can have rapid growth through weaning and yearling with a more moderate, mature cow size and weight. You can also have rapid growth through weaning and yearling with increased mature cow size and weight. Environment determines the ability of our genetics to perform up to their potential. The abundance or limitation of feed resources will influence the growth pattern and length of growth curve in cattle. We invite you to consider this in your bull purchasing decisions with respect to your mature cow size and production system.

CALVING-EASE BULLS HEIFER SAFE	PERFORMANCE WITH A MATERNAL EDGE	PERFORMANCE WITH EXTENDED GROWTH
